Established in June, 1948, the Guild meets every month at the home of one of the members to discuss possible productions and topics of interest in the theatrical world.

Plans are in the making for a play to be produced Oct. 20. Alumnae and members of the senior class of '49 are invited to call Mrs. Adrian Parker at 1601 St. Catherine Pangalo, Miami 4921 for further information.
“Martina, Martha, this is busy about many things.”

Graduates and undergraduates leaving Marian this spring will seek to make their mark upon the world through science, education, music, business, arts, and letters. But it is not only their own achievements that we wish for them. We also wish for them the family, the important unit of society; it determines, to a great extent, the happiness, success, or even the failure of the individual. This is the reason why the love of God, the appreciation for beauty and truth, the desire for virtue, is so important in the education of our students.

Looking Things Over

As the year ends, one realizes with a sudden start that there will be time enough to do many things that have been pushed back for a long time. Spring is here, and graduation is at hand. Mary Jane Porter, '49

College Seekers

In Press Exchange

by Betty Kennedy

Green eyes and shades and huge La Rosa egrets were waiting in the deep-throated wunny's, at the press conference at Our Lady of Cincinnati during the regional NFCCS Congress Apr. 23-24. Nor were new ideas and resolutions. Like knights at King Arthur's round table, dolgans and observans (and perhaps a few curiosity seekers) gathered together in the Edith room really wearing their NFCCS tags. From far and near they came to discuss, dispute, and submit plans for the future of the press commission.

The offices of some-minded members is to be a gathering and discussion center for regional news. From Indianapolis to Cincinnati, and from Cincinnati to Columbus, the offices of the Commission on the News are open to students and faculty members.

The College Seekers will have projects of regional schools via the evening paper.

The publications people feel that this press commission will promote a more effective and primary function of the NFCCS-Catholic college unity.

The 8-year-old federalism is growing, and from its growth springs the need of strong leadership. It is she who instills in the hearts of her children, the love of God, the appreciation for beauty and truth, the desire for virtue. She is the one to choose for the position of the press commission. So pause and consider what it is that you want for yourself and your future.

New Gymnasium Embodies Modern Architectural Notes

In Stone Marquise, Block Windows, Aluminum Doors

Of restrained modern architecture the new gymnasium, first completed unit of the current building project, is rectangular, brick faced, and trimmed in first quality buff Bedford limestone.

The entrance, facing north toward the lake, is entirely of stone. Its doors, transoms, and marquises, or canopy, are framed in asphaltum aluminum. Fluorescent lights are built into the marquises. Three octagonal windows near the corners accentuate the modern design of the building. All are of water clear units of pressed glass.

Steel beams supporting pre-cast concrete slabs form the skeleton of the roof. This slab is covered with insulation board and four piles of tar-saturated asbestos which control the temperature both summer and winter. The final surface is a pitch and gravel roof.

The gymnasium proper is 106 feet, 10% inches long by 65 feet, 10 inches wide. The air space from the playing floor to the lowest obstruction is 30 feet, 9% inches.

The maple wood flooring, mounted on a sub-floor of yellow pine, is glued to reinforced concrete construction, thus allowing room for heating and a two-part ventilation system. Lights are of the incandescent, reflector type.

Chief feature is a recreational room, 65, 10 inches wide by 61 feet long. An adjacent alcove, 25 feet by 45 feet, can eventually be used as a bowling alley. The recreation room has a Softone acoustical ceiling, a terrazzo floor, and fluorescent lighting.

A locker room, showers, and storage room complete the ground floor facilities.

Most of the materials used in this building designed by D. A. Bohem and Son, architects, and constructed by F. A. Wilhelm, contractor, are from Indiana.
