Using Palliative Leaders In Facilities to Transform care for Alzheimer's Disease (UPLIFT-AD) – palliative care clinical trial in nursing homes

^{1,2}Kathleen Unroe, MD, MHA, ³Arthur Equihua ¹Regenstrief Institute - Indiana University, ²IU-Center for Aging Research, ³Marian University-COM

ABSTRACT

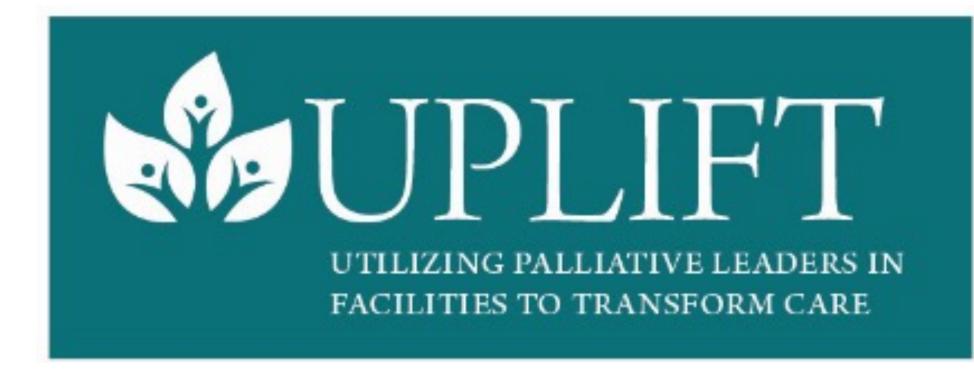

Nursing Homes (NH) often struggle to provide Palliative Care (PC) to their residents with Alzheimer's and other Related Dementias (ADRDs). As a result, many NHs are searching for external PC consultants to help facilitate care within their facilities. Unfortunately, there are no clinical trials that provide examples of sustainable models of PC or their effectiveness in this population. Although, there is evidence that knowledge of or training in PC by NH staff can have benefits in patient care.

The purpose of this study is to assess the effectiveness of the UPLIFT- PC implementation model in enhancing capacity of nursing homes to train in primary PC and improving the quality of life and quality of care for ADRD nursing home patients.

TIMELINE

The trial is currently on-going and will be implemented over a total of 36 months and include 740 residents in 16 diverse NHs in IN and MD.

Study Sites		Random sequential rollout of UPLIFT at all sites PROJECT YEARS				
		Y01	Y02	Y03	Y04	Y05

	Facility E & F					
	Facility G & H					

REPRODUCIBLE PALLIATIVE CARE IMPLEMENTATION STRATEGY FOR NURSING HOMES MANAGING DEMENTIA PATIENTS

TRAINING

- ~8hrs PC Leads in-house
- Symptom management
- Disease management
- Managing scenarios involving patients with ADRD
- Hospice Eligibility
- Advanced care planning conversations with family

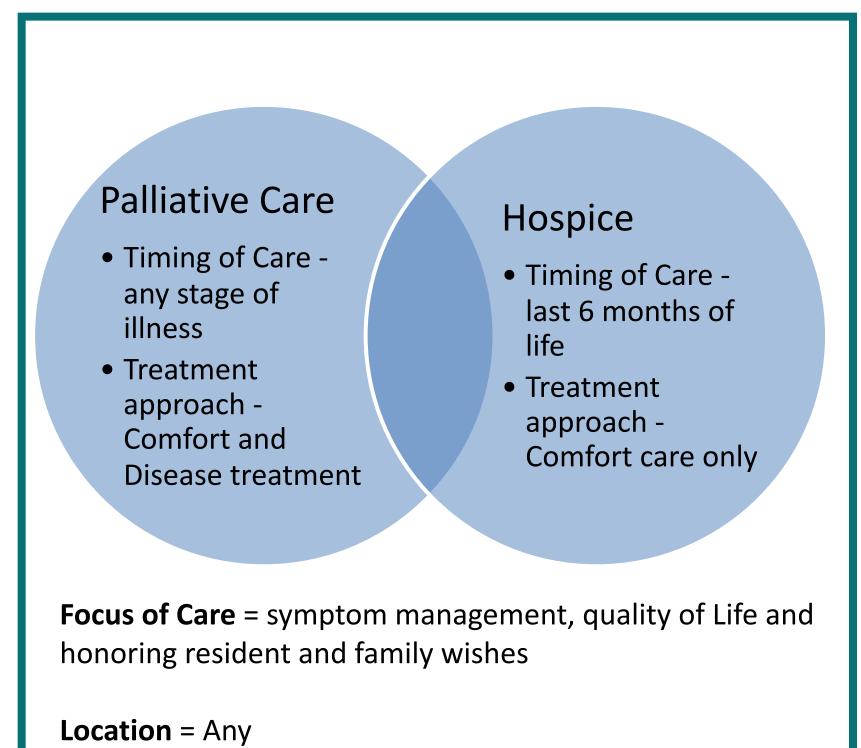

IMPLEMENTATION

- Pre-implementation meetings with research team (tailored process)
- Establish relationship with external PC leads
- Meetings with families

ASSESSMENT/REPORTING

- Regular reviews of PC staff
- Identification and tracking of patients within EHR
- Assessing progress of patient symptoms
- Meeting with families gauging efficacy

Palliative Care vs Hospice

CONCLUSION

The UPLIFT-AD intervention is a model of care for increasing access to palliative care services for nursing home residents, relying on a combination of internal capacity building and external specialty consultant support

ACKOWLEDGEMENTS

I thank Dr. Kathleen Unroe, Regenstrief Institute - Indiana University, Maryland University and the UPLIFT Research team for providing me this great summer experience. This research is funded by National Institute of Health (NIH).

Integrated Palliative Care Framework
